

Licence Protector – Service Release (Version 2.4.1)

Installation Instruction

This is a Service Release and you need a valid version 2.4 installed.

Installation Instruction

- ▶ Step 1: Select the installation directory of version 2.4. The updater checks the licence file on this directory
- ▶ Step 2: The programme version is installed. You are prompted for a directory. **Never install the version on the same directory as your old version** – it should always be installed on a new directory 2.4.1. Your old licence file is copied and updated. Do not manually copy the old licence file to the new folder
- ▶ Step 3: **Backup the licence file licprotector.lic.**
- ▶ Note: The Automatic Licence Generator and Web Activation Server have not changed. It is still release 2.4

Important Notes

This update added the new EasyGo DLL. If you do not use this functionality, nothing has changed. The other DLLs are still version 2.4.

The LicProtectorEasyGo.DLL can be used **only with** recompilation of the original application. The CLSID has changed.

```
ProgID="LicenceProtector.LicProtectorEasyGo241"  
CLSID={31A87D3A-CDB1-403F-9CD6-4DCCF7E036A8}
```

All programme modifications can be found here:

www.mirage-systems.de/licence-protector/modhistory241.html

Documentation

A new documentation: **Guide for EasyGo** has been added.
