

Licence Protector – Fall 05 Release (Version 2.4) Installation Instruction

This is a main release and the update programme needs a valid update subscription with an expiry date after December 1st, 2005.

Installation Instruction

- ▷ Step 1: Select the installation directory of version 2.3.x. The updater checks the licence file on this directory
- ▷ Step 2: The programme version is installed. You are prompted for a directory. **Never install the version on the same directory as your old version** – it should always be installed on a new directory 2.4. Your old licence file is copied and updated. Do not manually copy the old licence file to the new folder
- ▷ Step 3: **Backup the licence file licprotector.lic.**
- ▷ Step 4: Install Update Automatic Licence Generator (if required). Copy the licprotector.lic file from your backup to the installation folder
- ▷ Step 5: Install Web Activation Server Generator (if required). Copy the licprotector.lic file from your backup to the installation folder on the server (...\\bin\\alg)
- ▷ You should never delete an old version of Licence Protector – this allows to create files and keys with old file formats if required

Important Notes

The LicProtector.DLL can be used **only with** recompilation of the original application. The CLSID has changed.

```
ProgID="LicenceProtector24.lpLicprotector24"  
CLSID={31A87D3A-CDB1-403F-9CD6-4DCCF7E036A8}
```

```
TypeLib={A909415C-C103-4310-AC83-34CC25A21BE5}  
InterfaceID={065466F4-D6C6-485A-983D-DBEA56A63FE}
```
